TECHNICAL SPECIFICATIONS

GPS

In January 2009, in keeping with the world's hi-tech progress and in the aim of giving clients better control and more assurance, MAP's trucks were set with a state-of-the-art GPS tracking device that uses the Global Positioning System to determine the precise location of each truck to which it is attached and to record its position at regular intervals.

Easy to use, our GPS uses Google Maps to locate and track the vehicles 24 hours a day, 7 days a week. From your office, log in and make sure your rented vehicle is on time and is doing its assigned routing. Be it one, two or more trucks, each vehicle is given a specific code and can be tracked independently.
